

Assignment 2

Due 7/19

(1)

Define a vector that can store 10 string : zero, one, two, three, four.....nine

(a): write a program, let user enter an integer and it will convert it to the word, for example,

input: 0

out put: zero

(b) write a program let user enter a word and the program will convert it to a number.

PS: to type in a string use command getline.

Example: if you want to type in a string a.

string a;

getline(cin,a);
