Assignment 5
Due 7/30

(1)

Based on your Lab11, now add a new public member function tomorrow.

Requirement:

1, By calling tomorrow, the date will move to the tomorrow i.e, in following code

Date test;

test.set_value(21,10,1994);

test.tomorrow();

test.print();

the output is 10/22/1994

However, you should consider the boundary condtion:

For example:

the tomorrow of 3/30/1994 is 4/1/1994;

the tomorrow of 12/30/1994 is 1/1/1995

PS: The end date of a year is 12/30/year because in set_value we just ignore the difference of number of days among months and set the upper limits as 30.

In your code you must consider these boundary conditions in month and year.
